

Slow Closing Valves

You know the damaging effects of water hammer in your system. Leaking, noisy pipes and broken meters are commonplace. Want a reliable, economical solution? Carlon valves to the rescue. Carlon has a line of two-way zero pressure differential (ZPD) slow closing solenoid valves available in 1/2" – 2" sizes. ZPD allows the valve to function even at very low rates. Why choose a slow closing valve over a standard valve? It's all about the value because only slow closing valves reduce water hammer effects. Also, when you buy a Carlon slow closing valve at the same time you buy one of our meters, we will increase your meter warranty from the standard one year to seven years! That's measurable added value you can count on. So next time you order a meter be sure to include the only value-added valve choice in the market...Carlon slow-closing valves.

CARLON SLOW CLOSING VALVE SPECIFICATIONS

Description: Slow-closing two-way, normally closed pilot control and coupled solenoid valve.

Features: Water hammer free design. Suitable for hot and cold water applications.
Zero differential pressure.

Materials: Brass body with NBR seal

Electrical Connection: 1/2" NPT conduit

Ambient Temperature Range: 194 degree F

Pressure Range: 1 -140 PSI

Operating Voltages: 120 VAC Standard. Others available upon request

Protection Class: NEMA 4

DIMENSIONS

MODEL	SIZE	LENGTH	WIDTH	HEIGHT	WEIGHT	CV FACTOR
SCV050	1/2"	2 1/2"	1 1/2"	3 5/16"	0.68 lbs	2.4
